

Cabling Infrastructure

Copper & Fibre Optic

Our professional project managers ensure the completeness of proposal documentation (brochures, datasheets and specification) all the way to completion of the project. Their follow through also includes after sale support and follow up in very professional ways.

We deliver a wide range of services to commercial, educational and government sectors. We have maintained annual increase in turnover.

The department has a dedicated team of installation engineers that use the latest test equipment with expertise in CAT 6 UTP, Fibre Optics and both of indoor and outdoor wireless networks, as well as excellent network design and implementation skills.

Network Cabling Infrastructure

- UTP & Fibre Optics cabling (indoor & outdoor) using Cable Trays, PVCs, EMTs & Cable Trunks.
- UTP & Fibre Optics termination.
- UTP & Fibre Optics testing report.

CABLING:

We have a team of experts for cabling UTP & Fibre Optics in the fastest timely manner. We guarantee a professional installation for your satisfaction.

TERMINATION:

We have certified technicians in Passive Networking. Our technicians have experience in Fibre Optics & UTP termination.

TESTING:

We use the best testers to give you reports about installed nodes. This way you can be assured that your cables are terminated in the right way.

LABELLING:

All nodes are numbered and labelled. In the situation of non-functioning node, labels will come handy for your troubleshooting.

RAISED FLOOR SYSTEMS:

We have a professional team for installing raised floors in your data rooms, which enable organising cables as well as absorbing any static electricity from objects.

ACCESS CONTROLS:

We use the latest access devices to control and record the entry of people into your data rooms. You can use these access devices as a time attendance too.

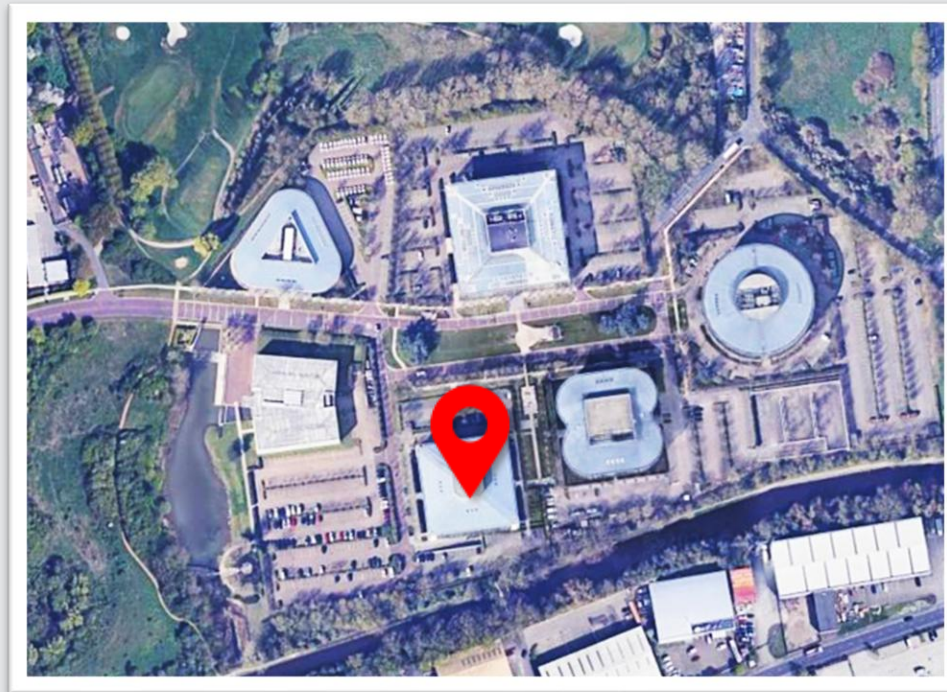

GENERATORS & UPS:

To avoid sudden electricity cut-off, we supply and install electric generators with UPS (Uninterruptible Power Supply) system for the protection of all devices in your data rooms.

CCTV:

Installation of CCTV system to secure your data rooms. This system can be installed to all your company's facility too. You can monitor your company from your mobile phone everywhere.
